PT Humanised and chimeric antibodies for EGF receptor - used in diagnosis
PT and therapy of tumours.
XX
PS Claim 6; Page 12; 24pp; English.
XX
CC AAR96286-R96293 represent framework regions (FR) for a humanised
CC monoclonal antibody (Ab) specific for the human epidermal growth factor
CC (EGF) receptor. This Ab binds to human EGF-R, and inhibits binding of EGF
CC to the EGF-R. The humanised Ab comprises antigen binding sites (CDR's) of
CC non-human origin, and FRs of the variable and constant regions of light
CC and heavy chains of human origin. The constant heavy chain region used
CC comprises the amino acid sequence of a gamma-1 chain. The constant light
CC chain region used comprises the kappa chain of a human immunoglobulin.
CC High levels of EGF-R have been detected in malignant tumours originating
CC in the epithelium. These include breast tumours, bladder tumours, ovarian
CC tumours, colonic tumours, lung tumours, brain tumours and tumours of the
CC oesophagus. The presence of EGF-R in tumour cells is an indicator of a
CC poor prognosis (particularly in human breast cancer). The Ab can
CC therefore be used for diagnostic localisation and assessment of tumour
CC growth. The Ab can also be used in the design of a drug targetted to the
CC tumour

CC AAW62793-822 represent fragments of human antibodies produced by
CC transgenic Xenomice, created using the method of the invention. The
CC specification describes a transgenic non-human mammal which has genome
CC modifications that comprise an inactivated endogenous immunoglobulin (Ig)
CC locus, so that the mammal does not display normal B-cell development. The
CC modified genome also has an inserted human heavy chain Ig locus in
CC germline configuration, the human heavy chain Ig locus comprising a human
CC micro constant region and regulatory and switch sequences, human J-H
CC genes, human D-H genes, and human V-H genes and an inserted human kappa
CC light chain Ig locus in germline configuration, the human kappa light
CC chain Ig locus comprising a human kappa constant region, J-kappa genes,
CC and V-kappa genes, where the number of V-H and V-kappa genes inserted are
CC selected to restore normal B-cell development in the mammal. The
CC transgenic animals have a near complete human Ig locus, including both a
CC human heavy chain locus and a human kappa light chain locus. They can be
CC used for the production of human antibodies when exposed to particular
CC antigens e.g. when exposed to human IL-8, EGFR or TNF- alpha the mice
CC will produce antibodies to IL-8, EGFR or TNF- alpha respectively

PT   Humanised antibodies against epidermal growth factor receptor, EGF-r -
PT   useful to treat solid tumours whilst inducing reduced immunogenic or
PT   allergic effects compared to mouse or mouse-derived antibodies.
XX
PS   Example 3; Page 104; 143pp; English.
XX
CC   The variable kappa light region 018 encoded amino acid was used in the
CC   production of anti-epidermal growth factor receptor (EGF-r)-antibodies.
CC   The antibodies can be administered therapeutically to patients (human or
CC   veterinary) to treat solid tumours. EGF-r is overexpressed on many human
CC   solid tumour types, and the fully human antibodies (i.e. comprising and
CC   inhibit both epidermal growth factor (EGF) and transforming growth factor
CC   alpha (TGF-alpha) binding to EGF-r (known to lead to cellular
CC   proliferation and tumour growth). They can prevent tumour cell growth
CC   and, in combination with an antineoplastic agent, may eradicate
CC   established tumours. The fully human antibodies can minimise the
CC   immunogenic and allergic responses intrinsic to previous mouse/rat or
CC   mouse/rat-derived antibodies

XX
CC   The invention relates to an antibody that binds to an epidermal growth
CC   factor receptor (FGF-r) and exhibits inhibition of tyrosine
CC   phosphorylation of EGF-2, the degradation of EGF-r, the EGF induced
CC   degradation of EGF-r, vascular endothelial cell growth factor (VEGF)
CC   production by tumour cells (by greater than 50%) and endothelial cells
CC   (by greater than 40%) and also protects threonine phosphorylation of EGF-
CC   r and a 63KD protein. The antibody is internalised with EGF-r. The
CC   antibody may be used for treating tumours such as lung tumours and colon
CC   tumours and for treating inflammation and autoimmune diseases. Sequences
CC   ABO04824-ABO04859 represent human EGF-r receptor antibodies of the
CC   invention

PT   New isolated human monoclonal antibody that binds to human epidermal
PT   growth factor receptor (EGF-r) and inhibits tyrosine phosphorylation or
PT   degradation of EGF-r, useful for treating tumors.
XX
PS   Example 3; SEQ ID NO 36; 128pp; English.
XX
CC   The invention relates to a novel isolated human antibody that binds to a
CC   human epidermal growth factor receptor. The antibody inhibits tyrosine
CC   phosphorylation of epidermal growth factor receptor (EGF-r), is
CC   internalized with EGF-r, inhibits the degradation of EGF-r, inhibits the
CC   EGF induced degradation of EGF-r, protects threonine phosphorylation of
CC   EGF-r, protects threonine phosphorylation of a 63 KD protein, inhibits
CC   vascular endothelial growth factor (VEGF) production by tumor cells by
CC   greater than 50%, and inhibits VEGF production by endothelial cells by
CC   greater than 40%. Further disclosed are nucleotide sequences encoding and
CC   amino acid sequences comprising heavy and light chain immunoglobulin
CC   molecules, particularly sequences corresponding to a contiguous heavy and
CC   light chain sequences from complementarity determining region (CDR)1-
CC   CDR3. Also disclosed are hybridomas expressing the immunoglobulin
CC   molecules and monoclonal antibodies. The antibody is useful for treating
CC   tumors or for inhibiting tyrosine phosphorylation or the degradation of
CC   EGF-r, for protecting threonine phosphorylation of EGF-r or 63 KD
CC   protein, or for inhibiting VEGF production by tumor cells. The current
CC   sequence represents the hybridoma E1.1 immunoglobin Vkappa 018 amino acid
CC   sequence.

PT   New antibody or its antigen-binding fragment that binds to IP-10, useful
PT   for diagnosing, preventing and/or treating autoimmune diseases preferably
PT   inflammatory bowel disease including Crohn's disease and ulcerative
PT   colitis.
XX
PS   Example 5; SEQ ID NO 16; 80pp; English.
XX
CC   The specification describes an antibody that binds to IP-10, where the
CC   antibody is capable of preventing or reducing severity of at least one
CC   symptom of an inflammatory bowel disease. IP-10 (CXCL10) is a chemokine
CC   that is induced by interferon gamma and is the ligand for CXCR3. The
CC   antibody is useful for inhibiting chemotaxis or migration of lymphocytes
CC   such as T cells, and for diagnosing, preventing and treating autoimmune
CC   diseases, preferably inflammatory bowel diseases including Crohn's
CC   disease and ulcerative colitis. It is also useful for preventing or
CC   reducing severity of at least one symptom of an inflammatory bowel
CC   disease such as colon inflammatory lesions, body weight loss, diarrhea,
CC   and rectal prolapse. The antibody is also useful for evaluating the
CC   treatment efficacy of a therapeutic approach and as a detecting agent in
CC   in vitro assays for research purposes. It can be further used to identify
CC   or isolate novel receptors or other binding proteins for IP-10. The
CC   present sequence represents the DPK1/JH6 region which was used to produce
CC   humanized antibody HuAIP13, an antibody of the invention.

PT   treating, preventing and diagnosing inflammatory bowel disease such as
PT   Crohns disease and ulcerative colitis.
XX
PS   Disclosure; SEQ ID NO 16; 78pp; English.
XX
CC   The invention relates to a high affinity anti-human IP-10 antibody or its
CC   fragment and a method of reducing the severity of symptoms of
CC   inflammatory bowel disease. The invention is useful for preventing,
CC   treating or reducing severity of at least one symptom of an inflammatory
CC   bowel disease (IBD) such as Crohn's disease (CD) or ulcerative colitis
CC   (UC). It is also useful in diagnostic and prognostic evaluation of
CC   diseases and disorders, preferably CD and UC, associated with IP-10
CC   expression. IP-10 antibody is useful for detecting IP-10. It is useful as
CC   detecting agents in in vitro assays for research purposes e.g. for
CC   identifying or isolating novel receptors or other binding proteins for IP
CC   -10. The present sequence is the human anti-human IP-10 antibody related
CC   protein.

PT New antibody specific for treatment and diagnosis of cancer.
XX
PS Claim 2; Fig 2; 82pp; English.
XX
CC This sequence represents a humanised version of the murine COL1 VK chain,
CC designated REIVK, and was used to obtain the humanised antibody (Ab) of
CC the invention. The humanised Ab, or its fragment, specifically binds to
CC carcinoembryonic antigen (CEA). The Ab, optionally coupled to an effector
CC or label, is used to treat or prevent CEA-expressing cancers (e.g. of
CC breast, ovary, lung, stomach, or colon) and to detect CEA-expressing
CC cells, either in vitro (optionally on a solid support) or in vivo
CC (particularly by tumour imaging to identify tumours and metastases before
CC surgery), for diagnosis or prognosis. It is not significantly
CC immunogenic, i.e. the Ab does not induce a human anti-murine antibody or
CC allergic response, or non-specific cytotoxicity, so can be administered
CC repeatedly. It retains specificity for CEA, and has improved clearance
CC (allowing efficient targeting) and metabolic properties

PT New humanized antibody or humanized antibody fragment that specifically
PT binds carcinoembryonic antigen CEA, useful for treating CEA-expressing
PT cancer.
XX
PS Claim 2; Fig 2; 34pp; English.
XX
CC The invention discloses a humanised antibody or humanised antibody
CC fragment that specifically binds the tumour antigen, carcinoembryonic
CC antigen (CEA). The antigen is expressed by various human carcinomas
CC including breast, lung and gastrointestinal carcinomas such as stomach
CC and colon cancers. The humanised antibody fragment is derived from a
CC murine antibody, COL-1, which has a high affinity for CEA. Also disclosed
CC is a nucleic acid sequence from which may be expressed the humanised

CC antibody or humanised antibody fragment and a composition for treating,
CC or detection of, cancer comprising the humanised antibody or humanised
CC antibody fragment. The humanised antibody or humanised antibody fragment
CC is useful for treating CEA-expressing cancer. The sequence presented is
CC the human REI framework region (FR) variable light domain template. The
CC FRs are regions of the antibody amino acid sequence interposed between
CC the complementarity determining regions (CDRs)

CC -!- MISCELLANEOUS: The second and third hypervariable regions of this
CC chain are identical with those of the human POM V-III kappa chain,
CC with which it shares certain idiotypic determinants.
CC -!- MISCELLANEOUS: This chain was isolated from an IgM with anti-gamma
CC globulin activity.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Result No.	Score	% Query Match	Length	DB	ID	Description

PT   Human nucleic acids containing single nucleotide polymorphisms, useful
PT   for treating a subject suffering, or at risk from a pathology due to the
PT   presence of a sequence polymorphism.
XX
PS   Disclosure; Page 543; 543pp; English.
XX
CC   Sequences AAB11749-B11828 represent 80 polymorphic peptide sequences
CC   encoded by human nucleic acid sequences (sequences 1113 to 1192; AAA77430
CC   - AAA77509) which contain single nucleotide polymorphisms (SNPs).
CC   Sequences 1193 to 1208 (AAB11749-B11764) are consecutive pairs of
CC   peptides exhibiting conservative amino acid changes, while sequences 1209
CC   to 1266 (AAB11765- AAB11822) exhibit non-conservative changes. Sequences
CC   1267 to 1272 (AAB11823- AAB11828) result from frameshift mutations. The
CC   invention also relates to antibodies raised against the peptides, to a
CC   method of detecting polymorphic proteins/ peptides using the antibodies,
CC   and to human nucleic acids which contain silent SNPs (AAA76318-A77429).
CC   It also encompasses a method of detecting a polymorphic site in a nucleic
CC   acid and a method of determining the relatedness of two nucleic acids.
CC   The nucleic acids containing SNPs, and antibodies raised against the
CC   peptides are useful for treatment of an individual having, suspected of
CC   having, or at risk of developing a pathological condition due to the
CC   presence of a sequence polymorphism

PT Preparing immunoglobulin binding protein array in plant cells by
PT transforming the cells with different polynucleotides encoding binding
PT protein polypeptides specific to ligand, selecting plant cells for
PT preparing array.
XX
PS Disclosure; Fig 1A; 129pp; English.
XX
CC The invention relates to transforming a population of cells (e.g. plant
CC cells), comprising using a library of two different polynucleotides
CC encoding different immunoglobulin binding protein (IgBP) polypeptides
CC that specifically bind to a ligand or form one or more disulphide bonds
CC with polypeptides in transfected cells, to generate an IgBP that binds to
CC a ligand, and transformed plant cells are selected, and preparing an IgBP
CC array in plant cells. At least one peptide sequence has at least 75%
CC sequence identity to a framework region (FR) of a native IgM, IgG, IgA,
CC IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is
CC useful for preparing an immunoglobulin binding protein array, preferably
CC heavy chain binding protein (CHBP) array in eukaryotic cells especially
CC plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic
CC cells (e.g. insect cells or mammalian cells). The CHBP is useful for
CC discovery of e.g. screening assays of IgBPs having desired
CC characteristics. The present sequence is a mammalian immunoglobulin
CC derived peptide that may be incorporated into an IgBP of the invention

PT Preparing immunoglobulin binding protein array in plant cells by
PT transforming the cells with different polynucleotides encoding binding
PT protein polypeptides specific to ligand, selecting plant cells for
PT preparing array.
XX
PS Disclosure; Fig 1A; 129pp; English.
XX
CC The invention relates to transforming a population of cells (e.g. plant
CC cells), comprising using a library of two different polynucleotides
CC encoding different immunoglobulin binding protein (IgBP) polypeptides
CC that specifically bind to a ligand or form one or more disulphide bonds
CC with polypeptides in transfected cells, to generate an IgBP that binds to
CC a ligand, and transformed plant cells are selected, and preparing an IgBP
CC array in plant cells. At least one peptide sequence has at least 75%
CC sequence identity to a framework region (FR) of a native IgM, IgG, IgA,
CC IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is
CC useful for preparing an immunoglobulin binding protein array, preferably
CC heavy chain binding protein (CHBP) array in eukaryotic cells especially
CC plant cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic
CC cells (e.g. insect cells or mammalian cells). The CHBP is useful for
CC discovery of e.g. screening assays of IgBPs having desired
CC characteristics. The present sequence is a mammalian immunoglobulin
CC derived peptide that may be incorporated into an IgBP of the invention

PT New antibody or antibody fragment that specifically binds to IL-9, useful
PT for preparing a composition for preventing or treating e.g., atopic
PT allergy, asthma, mucin overproduction, chronic obstructive pulmonary
PT disorder or cystic fibrosis.
XX
PS Disclosure; SEQ ID NO 136; 206pp; English.
XX
CC This invention relates to novel humanised and chimeric antibody
CC molecules, and functional fragments thereof, which have specificity for
CC human interleukin-9 (IL-9). Specifically, it refers to recombinant

CC antibodies derived from several mouse anti-IL-9 monoclonal antibodies,
CC namely MH9A3, MH9D1 and MH9L1. The present invention describes using the
CC humanised and chimeric antibody molecules to treat, prevent and/ or
CC ameliorate disorders including bronchial hyperresponsiveness, asthma,
CC atopic allergy, mucin overproduction, chronic obstructive pulmonary
CC disorder, cystic fibrosis, chronic obstructive pulmonary disorder,
CC excessive T cell or neutrophil activity. Accordingly, these IL-9
CC antagonists exhibit antiallergic, antiasthmatic and cytostatic
CC activities. This peptide sequence is a peptide from the human light chain
CC framework region 4, used in an exemplification of the invention.

PT New protein comprising a light chain (LC) immunoglobulin variable domain
PT sequence and a heavy chain (HC) immunoglobulin variable domain sequence,
PT useful for preparing a composition for treating inflammatory or
PT neoplastic disorders.
XX
PS Disclosure; SEQ ID NO 36; 128pp; English.
XX
CC The invention relates to a novel isolated protein comprising a light
CC chain (LC) immunoglobulin variable domain sequence and a heavy chain (HC)
CC immunoglobulin variable domain sequence that form an antigen binding site
CC with binding affinity for the human CD44 extracellular domain and where
CC CDR3 of the LC variable domain sequence. A protein of the invention has
CC cytostatic, antiinflammatory, immunosuppressive, antiarthritic,
CC antirheumatic, dermatological, vasotropic, and neuroprotective activity,
CC and may have a use in antibody therapy. The protein is useful for
CC preparing a composition for treating inflammatory disorders, e.g.,
CC rheumatoid arthritis, lupus, restenosis, graft versus host response or
CC multiple sclerosis or neoplastic disorder, which is a malignant or
CC metastatic cancer. The present sequence represents a framework (FR)
CC region of a human CD44-binding antibody.

XX
PT New human antibody or antibody fragment which binds to a sequence of the
PT C-terminal domain of Apolipoprotein E (ApoE-CTD), useful for
PT manufacturing a medicament for treating or preventing an amyloid disorder
PT e.g. Alzheimers disease.
XX
PS Example 8; SEQ ID NO 524; 392pp; English.
XX
CC The present invention relates to a human antibody or antibody fragment,
CC which binds to the C-terminal domain of Apolipoprotein E (ApoE-CTD;
CC AEA44803) and also to human plaques. The antibody or its fragment is
CC useful for manufacturing a medicament for treating or preventing an
CC amyloid disorder such as Alzheimers disease, primary systemic
CC amyloidosis, secondary systemic amyloidosis, senile systemic amyloidosis,
CC familial amyloid polyneuropathy I, familial amyloid polyneuropathy III,
CC familial non-neuropathic amyloidosis, hereditary cerebral amyloid
CC angiopathy, Familial British Dementia, Hemodialysis-related amyloidosis,
CC Familial amyloidosis (Finnish type), Familial subepithelial corneal
CC amyloid, type II diabetes, Hereditary renal amyloidosis, Pituitary-gland
CC amyloidosis, injection localized amyloidosis, Medullary carcinoma of the
CC thyroid, Atrial amyloidosis, Familial Danish dementia (FDD), Downs
CC syndrome, Spongiform encephalopathies, Sporadic Creutzfeldt-Jakob
CC disease, Gerstmann-Straussler-Scheinker Disease (GSS), Kuru, Parkinsons
CC disease, Huntingtons disease, Familial amyotrophic lateral sclerosis, and
CC chronic obstructive pulmonary disease. The present sequence was used to
CC illustrate the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
PS Claim 7; Page 39; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence corresponds to the first framework region of the
CC heavy chain of the humanised MAb. See AAR97313-97333

PT   New multivalent, monospecific binding protein comprising two or more
PT   binding sites having affinity for the same single target antigen, where
PT   each binding site is associated with scFv fragments, useful for
PT   diagnosing or treating tumor.
XX
PS   Disclosure; Fig 12; 62pp; English.
XX
CC   The present sequence is the protein sequence of the heavy chain variable
CC   region of anti-carcinoembryonic antigen (CEA) humanized monoclonal
CC   antibody hMN-14. scFv constructs comprising the hMN-14 VH and Vkappa
CC   regions are used in novel multivalent, monospecific binding proteins
CC   (diabody, triabody and tetrabody) of the invention (see also ABR42754,
CC   ABR42757 and ABR42758). Claimed binding proteins are specific for a
CC   tumour-associated antigen, and are used in the diagnosis and treatment of
CC   a tumour, carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma,
CC   lymphoma or myeloma, or a cancer selected from acute lymphoblastic
CC   leukaemia, acute myelogenous leukaemia, biliary, breast, cervical,
CC   chronic lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC   lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC   prostate and bladder

PT   Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT   comprises administering, either concurrently or sequentially, Class III
PT   anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT   therapeutic agent(s).
XX
PS   Claim 14; Fig 16B; 88pp; English.
XX
CC   The invention relates to a method of treating a non-medullary thyroid
CC   carcinoma or treating medullary thyroid carcinoma involves administering
CC   to a subject, either concurrently or sequentially, a Class III anti-CEA
CC   (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC   least one therapeutic agent. The antibody or its fragment comprises the
CC   complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC   antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC   medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC   ovarian cancer, in a subject. This sequence corresponds to the humanised
CC   murine MN-14 antibody heavy chain variable region.

PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Disclosure; Fig 23b; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This polypeptide sequence is the humanised
CC   murine MN-14 antibody heavy chain variable region protein of the
CC   invention.

PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 9; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the heavy chain variable, VH,
CC   region of antibody hMN14. The VH protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

XX
CC   The heavy chain and hinge region (AAR94557) and light chain (AAR94558) of
CC   humanised anti-CEA antibody MN14 are the products of an Fab'/F(ab')2
CC   dicistronic gene (AAT14493). They are derived from anti-CEA murine
CC   monoclonal antibody MN14 following cloning and humanisation of
CC   complementarity determining regions. The dicistronic gene was used to
CC   construct vector MN14pBEV. A protein kinase substrate (see AAR94550)
CC   encoding sequence was incorporated into the vector, and MN14-Kemptide
CC   fusion protein was secreted from E. coli BMH71-18 mutS. The fusion
CC   protein can be radiolabelled with 32P or 33P and used for targetted
CC   radiotherapy of tumours or infectious lesions

XX
CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

PT New multivalent, monospecific binding protein comprising two or more
PT binding sites having affinity for the same single target antigen, where
PT each binding site is associated with scFv fragments, useful for
PT diagnosing or treating tumor.
XX
PS Claim 31; Fig 11; 62pp; English.
XX
CC The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC to dimerize into a diabody, forming 2 binding sites for CEA. The
CC polypeptide also includes a pelB signal peptide, which precedes the VH
CC moiety to facilitate synthesis of the polypeptide in the periplasmic
CC space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC purification. In the claimed monospecific diabody, each scFv comprises
CC the present sequence. The diabody is an example of claimed multivalent
CC binding proteins specific for a tumour-associated antigen. The binding
CC proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC or a cancer selected from acute lymphoblastic leukaemia, acute
CC myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC bladder

PT Novel multivalent, multi-specific binding protein useful for treating
PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 11; Fig 6; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC exemplification of the present invention

PS   Claim 14; Fig 31; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #2 of a
CC   novel bispecific diabody comprising the VH region of monoclonal antibody
CC   hMN14 and the Vk region of monoclonal antibody 679. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen. The bispecific diabody can be produced using
CC   recombinant DNA methods, e.g. in Escherichia coli host cells. It provides
CC   a novel affinity enhancement system that shows specific affinity for HSG
CC   and CEA. Such bispecific diabodies pre-target CEA positive tumours for
CC   subsequent specific delivery of therapeutic radioisotopes carried by HSG-
CC   carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

Title: US-10-755-382-30
Perfect score: 151
Sequence: 1 EVQLVESGGGVVQPGRSLRLSCSSSGFDFT 30

Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 2166443 seqs, 705528306 residues

Total number of hits satisfying chosen parameters: 2166443

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 45 summaries

Database : UniProt_05.80:*
1: uniprot_sprot:*
2: uniprot_trembl:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 7; Page 39; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence corresponds to the first framework region of the
CC heavy chain of the humanised MAb. See AAR97313-97333

PT   Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT   comprises administering, either concurrently or sequentially, Class III
PT   anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT   therapeutic agent(s).
XX
PS   Claim 14; Fig 16B; 88pp; English.
XX
CC   The invention relates to a method of treating a non-medullary thyroid
CC   carcinoma or treating medullary thyroid carcinoma involves administering
CC   to a subject, either concurrently or sequentially, a Class III anti-CEA
CC   (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC   least one therapeutic agent. The antibody or its fragment comprises the
CC   complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC   antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC   medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC   ovarian cancer, in a subject. This sequence corresponds to the humanised
CC   murine MN-14 antibody heavy chain variable region.

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Disclosure; Fig 23b; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This polypeptide sequence is the humanised
CC   murine MN-14 antibody heavy chain variable region protein of the
CC   invention.

PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 9; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the heavy chain variable, VH,
CC   region of antibody hMN14. The VH protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

XX
CC   The heavy chain and hinge region (AAR94557) and light chain (AAR94558) of
CC   humanised anti-CEA antibody MN14 are the products of an Fab'/F(ab')2
CC   dicistronic gene (AAT14493). They are derived from anti-CEA murine
CC   monoclonal antibody MN14 following cloning and humanisation of
CC   complementarity determining regions. The dicistronic gene was used to
CC   construct vector MN14pBEV. A protein kinase substrate (see AAR94550)
CC   encoding sequence was incorporated into the vector, and MN14-Kemptide
CC   fusion protein was secreted from E. coli BMH71-18 mutS. The fusion
CC   protein can be radiolabelled with 32P or 33P and used for targetted
CC   radiotherapy of tumours or infectious lesions

XX
CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
```

XX
CC   The present sequence is the protein sequence of hMN-14-1G, which is
CC   designed to form an hMN-14 tetrabody. The hMN-14-1G polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa via a single glycine residues. Use of the 1G linker enables some
CC   of the the secreted polypeptide to form a tetrabody with 4 binding sites
CC   for CEA. The polypeptide also includes a pelB signal peptide, which
CC   precedes the VH moiety to facilitate synthesis of the polypeptide in the
CC   periplasmic space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific tetrabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC   lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC   prostate and bladder

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

CC   The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC   designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC   comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC   humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC   hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC   to dimerize into a diabody, forming 2 binding sites for CEA. The
CC   polypeptide also includes a pelB signal peptide, which precedes the VH
CC   moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. In the claimed monospecific diabody, each scFv comprises
CC   the present sequence. The diabody is an example of claimed multivalent
CC   binding proteins specific for a tumour-associated antigen. The binding
CC   proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC   melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC   or a cancer selected from acute lymphoblastic leukaemia, acute
CC   myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC   leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC   oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC   thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC   bladder

PT   Novel multivalent, multi-specific binding protein useful for treating
PT   cancer, has first binding site having affinity towards hapten group and
PT   second and third binding sites each having affinity towards target
PT   antigen.
XX
PS   Claim 11; Fig 6; 43pp; English.
XX
CC   The present invention describes a multivalent, multi-specific binding
CC   protein (I) comprising a first binding site having an affinity towards a
CC   hapten group and a second and a third binding sites each having affinity
CC   towards a target antigen, which may be the same or a different target
CC   antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC   and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC   useful for delivering a diagnostic agent, a therapeutic agent, or its
CC   combination to a target, which involves administering (I) to a subject,
CC   waiting for a sufficient amount of time for an amount of the non-binding
CC   protein to clear the subject's blood stream, and administering to the
CC   subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC   agent, or its combination, that binds to a binding site of the binding
CC   protein. (I) is also useful for detecting or treating a human disorder,
CC   preferably cancer, autoimmune diseases, infectious diseases,
CC   cardiovascular diseases and inflammatory diseases. The present sequence
CC   represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC   exemplification of the present invention

PT New kit comprising a multivalent, multi-specific binding protein and a
PT carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT for treating cancer, and cardiovascular, immune, inflammatory, or
PT infectious diseases.

```
XX
PS   Claim 14; Fig 35; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #2 of novel
CC   bispecific diabody BS2 comprising the VH region of monoclonal antibody
CC   hMN14 and the Vk region of monoclonal antibody 679. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen (CEA). The bispecific diabody can be produced
CC   using recombinant DNA methods, e.g. in Escherichia coli host cells. It
CC   provides a novel affinity enhancement system that shows specific affinity
CC   for HSG and CEA. Such bispecific diabodies pre-target CEA positive
CC   tumours for subsequent specific delivery of therapeutic radioisotopes
CC   carried by HSG-carrying peptides. Cancer, autoimmune diseases, infectious
CC   disease, cardiovascular diseases and inflammatory diseases can be
CC   detected or treated using the methods of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 7; Page 39; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence corresponds to the second framework region of the
CC heavy chain of the humanised MAb. See AAR97313-97333

PT   New human humanized antibody that specifically binds to fibroblasts
PT   activating protein alpha, useful for treating cancer or tumor, and for
PT   imaging tumors associated with activated stromal fibroblasts, e.g. lung
PT   or breast cancer.
XX
PS   Disclosure; Fig 6C; 109pp; English.
XX
CC   The present invention relates to a human or humanised antibody (Ab) which
CC   specifically binds to fibroblast activating protein alpha (FAPalpha). The
CC   antibodies are useful for preparing a composition for the treatment of
CC   cancer, and for imaging tumours associated with activated stromal
CC   fibroblasts, such as colorectal cancer, non-small-cell lung cancer,
CC   breast cancer, head and neck cancer, ovarian cancer, lung cancer, bladder
CC   cancer, pancreatic cancer and metastatic brain cancer, and diseases
CC   associated with the same, such as inflammation and wound healing. The
CC   present sequence is a peptide described in the exemplification of the
CC   invention

PT New immunoglobulin molecule, useful in therapeutic or diagnostic assays
PT comprising ELISA, phage display, tumor imaging or protein chips assay or
PT in screening assays for detecting molecules that bind to the
PT immunoglobulin molecule.
XX
PS Claim 7; SEQ ID NO 2; 198pp; English.
XX
CC The present invention relates to an immunoglobulin molecule comprising of
CC one or more heavy chain framework regions comprising HFR1, HFR2, HFR3 or
CC HFR4 and one or more light chain framework regions comprising LFR1, LFR2,
CC LFR3 or LFR4; and complementarity determining regions (CDRs) comprising
CC CDR-H1, CDR-H2, CDR-H3 and/or CDRL1, CDR-L2 or CDR-L3. The immunoglobulin
CC is useful in therapeutic or diagnostic assays comprising ELISA, phage
CC display, tumour imaging or protein chips assay. Further, the
CC immunoglobulin is useful in screening assays for detecting molecules that
CC bind to the immunoglobulin molecule. The present sequence represents a
CC chain framework region.

XX
PS Example 4; SEQ ID NO 144; 110pp; English.
XX
CC The invention describes an isolated antibody (I) that specifically binds
CC to an epitope specifically bound by an antibody expressed by a specific
CC clone where (I) binds to and neutralises botulinum neurotoxin type A
CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope
CC specifically bound by an antibody expressed by a clone chosen from clone
CC S25, C25, C39, 1C6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1,
CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum
CC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II)
CC comprising BoNT/A neutralising epitope having an epitope that is
CC specifically bound by an antibody expressed by clones as mentioned in (I)
CC ; producing (I); and a composition (III) comprising several anti-
CC botulinum neurotoxin antibodies, where each antibody is specific for a
CC different epitope of a botulinum neurotoxin and the combination of
CC antibodies shows greater toxin neutralisation than the single antibodies
CC in surplus. The following are disclosed: a pharmaceutical composition
CC comprising (I); and a kit comprising (I). (I) is useful for neutralising
CC BoNT/A antibody and for neutralising a botulinum neurotoxin which
CC involves contacting neurotoxin with (I) in surplus, where each of (I) is
CC specific for a different epitope of the botulinum neurotoxin and the
CC combination of antibodies shows greater toxin neutralisation than the
CC single antibodies in surplus. (I) is useful for diagnosing the botulism
CC or for treating pathologies associated with botulinum neurotoxin
CC poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I)
CC enables rapid detection or diagnosis of botulism. This is the amino acid
CC sequence of mouse heavy chain anti-BoNT-antibody framework region 2.

CC The invention describes an isolated antibody (I) that specifically binds
CC to an epitope specifically bound by an antibody expressed by a specific
CC clone where (I) binds to and neutralises botulinum neurotoxin type A
CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope
CC specifically bound by an antibody expressed by a clone chosen from clone
CC S25, C25, C39, 1C6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1,
CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum
CC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II)
CC comprising BoNT/A neutralising epitope having an epitope that is
CC specifically bound by an antibody expressed by clones as mentioned in (I)
CC ; producing (I); and a composition (III) comprising several anti-
CC botulinum neurotoxin antibodies, where each antibody is specific for a
CC different epitope of a botulinum neurotoxin and the combination of
CC antibodies shows greater toxin neutralisation than the single antibodies
CC in surplus. The following are disclosed: a pharmaceutical composition
CC comprising (I); and a kit comprising (I). (I) is useful for neutralising
CC BoNT/A antibody and for neutralising a botulinum neurotoxin which
CC involves contacting neurotoxin with (I) in surplus, where each of (I) is
CC specific for a different epitope of the botulinum neurotoxin and the
CC combination of antibodies shows greater toxin neutralisation than the
CC single antibodies in surplus. (I) is useful for diagnosing the botulism
CC or for treating pathologies associated with botulinum neurotoxin
CC poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I)
CC enables rapid detection or diagnosis of botulism. This is the amino acid
CC sequence of mouse heavy chain anti-BoNT-antibody framework region 2.

PT New human monoclonal antibodies directed against type III deletion
PT mutants of epidermal growth factor receptor (EGFRvIII), useful for
PT diagnosing, preventing or treating diseases associated with EGFRvIII
PT expression, e.g. cancer.
XX
PS Example 17; SEQ ID NO 122; 207pp; English.
XX
CC The invention relates to an isolated human monoclonal antibody, or its
CC variant, directed against deletion mutants of epidermal growth factor
CC receptor, particularly to the type III deletion mutant (EGFRvIII). Also
CC included are a hybridoma cell line producing the above antibody, a
CC transformed cell comprising a gene encoding the antibody, inhibiting cell
CC proliferation associated with the expression of EGFRvIII, an isolated
CC polynucleotide molecule comprising a nucleotide sequence encoding a heavy
CC or light chain amino acid sequence (or its fragment), an article of
CC manufacture (comprising a container, a composition contained in the
CC container, and a package insert or label indicating that the composition
CC can be used to treat cancer characterized by the expression of EGFRvIII,
CC where the composition comprises the antibody cited above), an assay kit
CC for the detection of EGFRvIII in mammalian tissues or cells (to screen
CC for lung, colon, gastric, renal, prostate or ovarian carcinomas, the
CC EGFRvIII being an antigen expressed by epithelial cancers, the kit
CC comprising an antibody that binds the antigen protein and means for
CC indicating the reaction of the antibody with the antigen, if present), a
CC purified protein variant of EGFRvIII, selecting variants of antibodies to
CC EGFRvIII, making antibody variants to EGFRvIII and killing a targeted
CC cell. The composition and methods are useful for diagnosing, preventing
CC or treating diseases associated with the expression of EGFRvIII, such as
CC cancer, gliomas, tumors and carcinomas. The present sequence is a peptide
CC derived from a VH region of an anti-EGFRvIII antibody of the invention
CC used to determine the antibody structure.

CC   fragment that binds to epidermal growth factor receptor type III deletion
CC   mutant (EGFRvIII), the antibody being conjugated to a therapeutic agent,
CC   which is a toxin chosen from AEFP, MMAE, AURISTATIN E, DM-1 and ZAP, and
CC   where the antibody comprises a heavy chain amino acid sequence chosen
CC   from antibodies 13.1.2, 131, 170, 150, 095, 250. EGFR variants are caused
CC   by gene rearrangement accompanied by gene amplification. Eight major
CC   variants of EGFR are known. EGFRvIII, which is the most commonly
CC   occurring variant of EGFR in human cancers, comprises a 267 aa in-frame
CC   deletion in the extracellular domain. The method of the invention
CC   demonstrates cytostatic activity and may be useful for inhibiting cell
CC   proliferation associated with the expression of EGFRvIII or for
CC   inhibiting cell proliferation of cells expressing EGFRvIII. As such the
CC   method may be utilized, in vivo, on a mammal e.g. human, suffering from
CC   an epithelial cell cancer such as lung, colon, gastric, renal, prostate,
CC   breast, glioblastoma or ovarian carcinoma. The current sequence is that
CC   of a human anti-epidermal growth factor receptor type III variant
CC   (EGFRvIII) antibody 13.1.2 heavy chain variable region peptide of the
CC   invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 7; Page 39; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence corresponds to the third framework region of the
CC heavy chain of the humanised MAb. See AAR97313-97333

PT Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT comprises administering, either concurrently or sequentially, Class III
PT anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT therapeutic agent(s).
XX
PS Claim 14; Fig 16B; 88pp; English.
XX
CC The invention relates to a method of treating a non-medullary thyroid
CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the humanised
CC murine MN-14 antibody heavy chain variable region.

PT Treating non-medullary or medullary thyroid carcinoma, involves
PT administering to subject, either concurrently or sequentially, anti-
PT carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS Disclosure; Fig 23b; 122pp; English.
XX
CC This invention relates to methods for treating cancers that express
CC carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC antibodies that can be used following administration of an agent that
CC will increase antibody effector functions or following administration of
CC an amount of interferon effective to upregulate CEA expression in tumour
CC cells. The present invention describes the anti-CEA antibody as a class
CC III humanised murine monoclonal antibody that retains specificity for CEA
CC binding and is preferably an MN-14 antibody or fragment thereof.
CC Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC composition useful for the treatment of non-medullary or medullary
CC thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC carcinoma, as well as breast or lung cancer. Furthermore, it can
CC stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC cell growth and angiogenesis. This polypeptide sequence is the humanised
CC murine MN-14 antibody heavy chain variable region protein of the
CC invention.

PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 9; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the heavy chain variable, VH,
CC   region of antibody hMN14. The VH protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

CC   The heavy chain and hinge region (AAR94557) and light chain (AAR94558) of
CC   humanised anti-CEA antibody MN14 are the products of an Fab'/F(ab')2
CC   dicistronic gene (AAT14493). They are derived from anti-CEA murine
CC   monoclonal antibody MN14 following cloning and humanisation of
CC   complementarity determining regions. The dicistronic gene was used to
CC   construct vector MN14pBEV. A protein kinase substrate (see AAR94550)
CC   encoding sequence was incorporated into the vector, and MN14-Kemptide
CC   fusion protein was secreted from E. coli BMH71-18 mutS. The fusion
CC   protein can be radiolabelled with 32P or 33P and used for targetted
CC   radiotherapy of tumours or infectious lesions

CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,

XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

XX
CC The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC to dimerize into a diabody, forming 2 binding sites for CEA. The
CC polypeptide also includes a pelB signal peptide, which precedes the VH
CC moiety to facilitate synthesis of the polypeptide in the periplasmic
CC space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC purification. In the claimed monospecific diabody, each scFv comprises
CC the present sequence. The diabody is an example of claimed multivalent
CC binding proteins specific for a tumour-associated antigen. The binding
CC proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC or a cancer selected from acute lymphoblastic leukaemia, acute
CC myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC bladder

PT Novel multivalent, multi-specific binding protein useful for treating
PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 11; Fig 6; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC exemplification of the present invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 7; Page 40; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence corresponds to the third framework region of the
CC heavy chain of the humanised MAb. See AAR97313-97333

PT   Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT   comprises administering, either concurrently or sequentially, Class III
PT   anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT   therapeutic agent(s).
XX
PS   Claim 14; Fig 16B; 88pp; English.
XX
CC   The invention relates to a method of treating a non-medullary thyroid
CC   carcinoma or treating medullary thyroid carcinoma involves administering
CC   to a subject, either concurrently or sequentially, a Class III anti-CEA
CC   (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC   least one therapeutic agent. The antibody or its fragment comprises the
CC   complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC   antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC   medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC   ovarian cancer, in a subject. This sequence corresponds to the humanised
CC   murine MN-14 antibody heavy chain variable region.

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Disclosure; Fig 23b; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This polypeptide sequence is the humanised
CC   murine MN-14 antibody heavy chain variable region protein of the
CC   invention.

PT   New chimeric molecule from humanized antibody against carcinoembryonic
PT   antigen and having signaling molecules of T cells and other effector
PT   cells, useful for the treatment of colorectal, breast and lung cancers.
XX
PS   Disclosure; Page 9; 20pp; English.
XX
CC   The invention relates to a chimaeric molecule comprising the
CC   carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC   as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC   chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC   which the cysteine residues have been mutated, with the IgTCR molecule
CC   occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC   appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC   NK (not defined) or other effector cells are useful in treating patients
CC   with cancers expressing the CEA antigen, together with other or with
CC   heterologous constructs to engage additional stimulatory and functional
CC   properties of the effector cells to enhance the anti-tumour therapeutic
CC   efficacy. The cancer disorder includes colorectal, breast and lung
CC   cancers. The present sequence represents the heavy chain variable, VH,
CC   region of antibody hMN14. The VH protein is humanised (complementarity
CC   determining region-grafted) and has a leader peptide

XX
CC   The heavy chain and hinge region (AAR94557) and light chain (AAR94558) of
CC   humanised anti-CEA antibody MN14 are the products of an Fab'/F(ab')2
CC   dicistronic gene (AAT14493). They are derived from anti-CEA murine
CC   monoclonal antibody MN14 following cloning and humanisation of
CC   complementarity determining regions. The dicistronic gene was used to
CC   construct vector MN14pBEV. A protein kinase substrate (see AAR94550)
CC   encoding sequence was incorporated into the vector, and MN14-Kemptide
CC   fusion protein was secreted from E. coli BMH71-18 mutS. The fusion
CC   protein can be radiolabelled with 32P or 33P and used for targetted
CC   radiotherapy of tumours or infectious lesions

XX
CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
```

XX
CC   The present sequence is the protein sequence of hMN-14-1G, which is
CC   designed to form an hMN-14 tetrabody. The hMN-14-1G polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa via a single glycine residues. Use of the 1G linker enables some
CC   of the the secreted polypeptide to form a tetrabody with 4 binding sites
CC   for CEA. The polypeptide also includes a pelB signal peptide, which
CC   precedes the VH moiety to facilitate synthesis of the polypeptide in the
CC   periplasmic space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific tetrabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC   lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC   prostate and bladder

XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

CC   The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC   designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC   comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC   humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC   hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC   to dimerize into a diabody, forming 2 binding sites for CEA. The
CC   polypeptide also includes a pelB signal peptide, which precedes the VH
CC   moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. In the claimed monospecific diabody, each scFv comprises
CC   the present sequence. The diabody is an example of claimed multivalent
CC   binding proteins specific for a tumour-associated antigen. The binding
CC   proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC   melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC   or a cancer selected from acute lymphoblastic leukaemia, acute
CC   myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC   leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC   oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC   thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC   bladder

PT cancer, has first binding site having affinity towards hapten group and
PT second and third binding sites each having affinity towards target
PT antigen.
XX
PS Claim 11; Fig 6; 43pp; English.
XX
CC The present invention describes a multivalent, multi-specific binding
CC protein (I) comprising a first binding site having an affinity towards a
CC hapten group and a second and a third binding sites each having affinity
CC towards a target antigen, which may be the same or a different target
CC antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC useful for delivering a diagnostic agent, a therapeutic agent, or its
CC combination to a target, which involves administering (I) to a subject,
CC waiting for a sufficient amount of time for an amount of the non-binding
CC protein to clear the subject's blood stream, and administering to the
CC subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC agent, or its combination, that binds to a binding site of the binding
CC protein. (I) is also useful for detecting or treating a human disorder,
CC preferably cancer, autoimmune diseases, infectious diseases,
CC cardiovascular diseases and inflammatory diseases. The present sequence
CC represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC exemplification of the present invention

PS   Claim 14; Fig 35; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #2 of novel
CC   bispecific diabody BS2 comprising the VH region of monoclonal antibody
CC   hMN14 and the Vk region of monoclonal antibody 679. Mouse antibody 679
CC   binds with high affinity to molecules containing the moiety histamine-
CC   succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC   carcinoembryonic antigen (CEA). The bispecific diabody can be produced
CC   using recombinant DNA methods, e.g. in Escherichia coli host cells. It
CC   provides a novel affinity enhancement system that shows specific affinity
CC   for HSG and CEA. Such bispecific diabodies pre-target CEA positive
CC   tumours for subsequent specific delivery of therapeutic radioisotopes
CC   carried by HSG-carrying peptides. Cancer, autoimmune diseases, infectious
CC   disease, cardiovascular diseases and inflammatory diseases can be
CC   detected or treated using the methods of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 7; Page 40; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence corresponds to the fourth framework region of the
CC heavy chain of the humanised MAb. See AAR97313-97333

PT New human antibody or antibody fragment which binds to a sequence of the
PT C-terminal domain of Apolipoprotein E (ApoE-CTD), useful for
PT manufacturing a medicament for treating or preventing an amyloid disorder
PT e.g. Alzheimers disease.
XX
PS Example 8; Page 102; 392pp; English.
XX
CC The present invention relates to a human antibody or antibody fragment,
CC which binds to the C-terminal domain of Apolipoprotein E (ApoE-CTD;
CC AEA44803) and also to human plaques. The antibody or its fragment is
CC useful for manufacturing a medicament for treating or preventing an
CC amyloid disorder such as Alzheimers disease, primary systemic
CC amyloidosis, secondary systemic amyloidosis, senile systemic amyloidosis,
CC familial amyloid polyneuropathy I, familial amyloid polyneuropathy III,
CC familial non-neuropathic amyloidosis, hereditary cerebral amyloid
CC angiopathy, Familial British Dementia, Hemodialysis-related amyloidosis,
CC Familial amyloidosis (Finnish type), Familial subepithelial corneal
CC amyloid, type II diabetes, Hereditary renal amyloidosis, Pituitary-gland
CC amyloidosis, injection localized amyloidosis, Medullary carcinoma of the
CC thyroid, Atrial amyloidosis, Familial Danish dementia (FDD), Downs
CC syndrome, Spongiform encephalopathies, Sporadic Creutzfeldt-Jakob
CC disease, Gerstmann-Straussler-Scheinker Disease (GSS), Kuru, Parkinsons
CC disease, Huntingtons disease, Familial amyotrophic lateral sclerosis, and
CC chronic obstructive pulmonary disease. The present sequence was used to
CC illustrate the invention.

PS Disclosure; Fig 1B; 160pp; English.
XX
CC The amino acid sequences of the light and heavy chains of the variable
CC domains from antibodies HYH [HYHEL-10 Fab-lysosyme complex] (AAR38601 and
CC AAR38608, respectively), MCPC [IgA Fab MCPC603-phosphocholine complex]
CC (AAR38602-03 and AAR38609-10, respectively), NEWM [Ig Fab' NEW] (AAR38604
CC -05 and AAR38611, respectively) and KOL [IgG1 KOL] (AAR38606-07 and
CC AAR38612, respectively) may be used to determine an alignment from which
CC appropriate changes may be made. Unlike other methods of humanisation,
CC which advocate the replacement of entire antibody framework regions with
CC those of human antibodies, this method involves only the introduction of
CC human residues into those positions not critical for antigen binding.
CC This ensures that the binding properties of the modified antibody are not
CC diminished. (Updated on 25-MAR-2003 to correct PN field.)

PT   Humanised antibody specific for select sub-population of T cells - useful
PT   for treatment of Crohn's disease and Multiple Sclerosis.
XX
PS   Claim 5; Page 82; 92pp; English.
XX
CC   A mouse monoclonal antibody (mAb), 16G8, which recognises human V beta
CC   8.1, was humanised by CDR grafting certain CDR and select framework
CC   residues from the murine mAb into KOL heavy chain and REI light chain
CC   frameworks. The cDNAs encoding humanised heavy (IgG1) and light (k)
CC   chains in mammamlian cell expression vectors with Neo and DHFR selection
CC   markers, respectively, were transfected into a DHFR- Chinese hamster
CC   fibroblast (CHO) cell line followed by selection and amplification. The
CC   humanised MAb that was secreted, designated "TM29", maintains the
CC   specificity for human TCR V beta 8.1. It is used as a therapeutic agent
CC   for Crohn's disease. (Updated on 25-MAR-2003 to correct PN field.)

PT   Prodn. of human monoclonal anti-tumour antibodies - by screening a fusion
PT   phage library produced using peripheral blood lymphocytes from a cancer
PT   patient.
XX
PS   Claim 19; Page 71; 82pp; English.
XX
CC   A process for isolating and synthesising human monoclonal anti-tumour
CC   antibodies has been produced. The process involves: (a) constructing at
CC   least one fusion phage library from the peripheral blood lymphocytes
CC   (PBLs) of a cancer patient; (b) screening for anti-tumour antibodies in
CC   the phage library in a binding assay with cultured tumour cells of the
CC   same type as the patient's tumour; (c) removing extraneous antibodies by
CC   absorption against normal human cells; (d) cloning the phage selected in
CC   step (b) and (c); (e) assaying the specificity of the cloned phage by
CC   incubating the phage with at least two types of cultured normal cells;
CC   and (f) further testing the specificity of cloned phage that do not bind
CC   to either cell line of cultured normal cells in further binding assays to
CC   cultured tumour cells derived from more than one other tumour that is not
CC   the patient's tumour. The present sequence represents a human heavy chain
CC   antibody, from a VH antibody fusion phage library, produced by a method
CC   as described above. The antibodies produced can be used for diagnostic
CC   and therapeutic applications and for isolating tumour antigens for
CC   studying tumourigenesis or for use as anti-cancer vaccines. The human
CC   antibodies have low immunogenicity in humans compared to murine
CC   monoclonal antibodies (MAbs). Since the antibodies are isolated from
CC   fusion phage libraries, their affinity and specificity for a tumour cell
CC   line can be improved by genetic manipulations

XX
PT   CDR-grafted antibody capable of inhibiting human tissue factor - used in
PT   the treatment of thrombotic disorders, e.g.intravascular coagulation,
PT   arterial restenosis etc.
XX
PS   Claim 7; Page 70-71; 142pp; English.
XX
CC   CDR-grafted heavy chain variable regions TF8HCDR1 (AAW10228) and
CC   TF8HCDR20 (AAW10230) each have heavy chain CDRs (see also AAW10222-24) of
CC   mouse anti-tissue factor monoclonal antibody TF8-5G9 grafted into a human
CC   KOL antibody framework. They can be used with CDR- grafted light chain
CC   variable regions (AAW10229, ") and human constant regions to prepare
CC   humanised antibodies that inhibit human tissue factor (see also AAW10232-
CC   33). Such antibodies can be used to treat e.g. intravascular coagulation,
CC   arterial restenosis and arteriosclerosis. (Updated on 17-OCT-2003 to
CC   standardise OS field)

PT Recombinant and humanised chimeric antibodies against human interleukin-1
PT -beta - for preventing and treating interleukin-mediated inflammatory
PT disorders.
XX
PS Claim 39; Page 40-41; 62pp; English.
XX
CC The heavy chain variable region (AAW11919) and light chain variable
CC region (AAW11920) of humanised anti-human interleukin-1 beta (IL-1 beta)
CC murine monoclonal antibody (MAb) SK48-E26 comprise the complementarity
CC determining regions from MAb SK48-E26 (see also AAW11917-18) grafted into
CC human frameworks. The humanised antibody can be produced in e.g. COS
CC cells transfected with vectors carrying humanised heavy and light chain
CC nucleic acids (AAT51437-39) for use in the treatment and prevention of IL
CC -1 mediated inflammatory disorders. (Updated on 16-OCT-2003 to
CC standardise OS field)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Example 5; Fig 1; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a

CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. See AAR97313-97333 for the CDR sequence and framework regions
CC of the humanised MAbs

PT Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT comprises administering, either concurrently or sequentially, Class III
PT anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT therapeutic agent(s).
XX
PS Disclosure; Fig 11A-B; 88pp; English.
XX
CC The invention relates to a method of treating a non-medullary thyroid
CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the murine MN-
CC 14 antibody heavy chain variable region.

XX
PT Treating non-medullary or medullary thyroid carcinoma, involves
PT administering to subject, either concurrently or sequentially, anti-
PT carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS Disclosure; Fig 11; 122pp; English.
XX
CC This invention relates to methods for treating cancers that express
CC carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC antibodies that can be used following administration of an agent that
CC will increase antibody effector functions or following administration of
CC an amount of interferon effective to upregulate CEA expression in tumour
CC cells. The present invention describes the anti-CEA antibody as a class
CC III humanised murine monoclonal antibody that retains specificity for CEA
CC binding and is preferably an MN-14 antibody or fragment thereof.
CC Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC composition useful for the treatment of non-medullary or medullary
CC thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC carcinoma, as well as breast or lung cancer. Furthermore, it can
CC stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC cell growth and angiogenesis. This polypeptide sequence is murine MN-14

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Disclosure; Fig 23b; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
```

CC cell growth and angiogenesis. This polypeptide sequence is the humanised
CC murine MN-14 antibody heavy chain variable region protein of the
CC invention.

PS Disclosure; Page 9; 20pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the
CC carcinoembryonic antigen (CEA) binding domain of humanised antibody MN14
CC as a single chain antibody with a (GGSGS)3 linker, the zeta signaling
CC chain of the T cell receptor (TCR) and an intervening CD8alpha hinge in
CC which the cysteine residues have been mutated, with the IgTCR molecule
CC occupying nucleotides 2426-3766 of the retroviral vector sequence.
CC appearing as ABX13168. The new chimaeric molecule expressed in T cells,
CC NK (not defined) or other effector cells are useful in treating patients
CC with cancers expressing the CEA antigen, together with other or with
CC heterologous constructs to engage additional stimulatory and functional
CC properties of the effector cells to enhance the anti-tumour therapeutic
CC efficacy. The cancer disorder includes colorectal, breast and lung
CC cancers. The present sequence represents the heavy chain variable, VH,
CC region of antibody hMN14. The VH protein is humanised (complementarity
CC determining region-grafted) and has a leader peptide

PT New chimeric molecule useful in treating patients with disorders, such as
PT melanoma, neuroendocrine disorders, prostate and small cell lung cancer
PT comprises GD3 and/or PSMA binding domains of antibody.
XX
PS Disclosure; Page 7-8; 35pp; English.
XX
CC The invention relates to a chimaeric molecule comprising the GD3
CC (ganglioside antigen) binding domain of antibody MB3.6, with any of 3
CC variable gene sequences, or the PSMA (prostate-specific membrane antigen)
CC binding domain of antibody 3D8, 4D4 and 3E11, with variable gene
CC sequences, the zeta signalling chain of the T cell receptor and an
CC intervening CD8alpha hinge in which cysteine residues have been mutated.
CC The chimaeric molecules expressed in T cells or NK cells or other
CC effector cells are useful in treating patients with cancers expressing
CC the GD3 (MB3.6 derivatives) or PSMA antigen (3D8, 4D4, 3E11 derivatives),
CC and/or together with each other or with heterologous constructs to engage
CC additional stimulatory and functional properties of the effector cells to
CC enhance the antitumour therapeutic efficacy (claimed). They are
CC particularly useful in disorders including melanoma, neuroendocrine
CC tumours and prostate and small cell lung cancer. The present sequence is
CC a hMN14 antibody (specific to CEA antigen) in a fusion protein with the
CC modified CD8alpha hinge and the T-cell receptor zeta chain (IgTCR)
CC encoded by a retroviral vector. The hMN14 antibody coding region is
CC replaced with the MB3.6, 3D8, 4D4 or 3E11 genes of the invention.

PT New antibody library comprising cells comprising at least one integrated
PT retroviral vector expressing an antibody light or heavy chain, useful in
PT preparing a composition for diagnosing or treating disorders.
XX
PS Disclosure; Fig 6; 57pp; English.
XX
CC This invention relates to a new antibody library which comprises at least
CC 100 cells, each of which comprises at least one integrated retroviral
CC vector expressing an antibody light or heavy chain. Antibodies are of
CC increasing importance in human therapy, assay procedures and diagnostic
CC methods and a need exists for efficient methods of generating and

CC screening antibody libraries containing large numbers of antibodies. The
CC antibody library of the invention addresses this need, with the
CC additional advantage of strict control over multiplicity of infection
CC (MOI), and is useful in preparing a composition for diagnosing or
CC treating a wide variety of disorders. The present sequence is the amino
CC acid sequence of the MN14HCF protein, which was encoded by the Gateway
CC retroviral vectors used in the exemplification of the invention.

PT body, useful as a pretargeting agent in methods for diagnosing or
PT treating diseases, such as autoimmune disease, and disease caused by
PT infectious agents.
XX
PS Example; Fig 1; 68pp; English.
XX
CC The invention relates to a mutant bispecific antibody (mbAb1) comprising
CC at least a human hinge constant region from immunoglobulin G (IgG), two
CC single chain variable fragments (scFvs), and two variable fragments
CC (Fvs), where the constant region contains one or more amino acid
CC mutations in the heavy chain 2 (CH2) domain. The methods and antibody of
CC the invention are used to diagnose or treat an immune dysregulation
CC disease, an autoimmune disease, organ graft rejection, cardiovascular
CC disease, neurological disease (Alzheimer's disease) or graft vs. host
CC disease. The methods are also useful for treating a disease caused by a
CC fungus, virus, parasite, or bacterium. The methods may also be used for
CC intraoperative or endoscopic diagnosis to identify diseased tissue. The
CC autoimmune diseases that may be diagnosed or treated include acute or
CC chronic idiopathic thrombocytopenic purpura, dermatomyositis, Sydenham's
CC chorea, myasthenia gravis, systemic lupus erythematosus, lupus nephritis,
CC rheumatic fever, polyglandular syndromes and diabetes mellitus. The
CC current sequence represents the hMN-14 heavy chain amino acid sequence.

PT Composition useful as cancer vaccine, comprises polypeptide having
PT antibody heavy chain fused to antibody light chain, or multivalent
PT antibody having two polypeptides with antibody heavy chain fused to
PT antibody light chain.
XX
PS Disclosure; SEQ ID NO 3; 101pp; English.
XX
CC The invention describes a composition (I) comprising: (a) a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain; or (b) a multivalent antibody comprising at least
CC two polypeptides, where each of the polypeptides comprises at least one
CC antibody heavy chain fused to at least one antibody light chain. Also
CC described: (1) a composition (II) comprising a nucleic acid comprising at
CC least one antibody heavy chain gene and at least one antibody light chain
CC gene, where the nucleic acid encodes a polypeptide comprising at least

CC one antibody heavy chain fused to at least one antibody light chain; (2)
CC a method (M1) of binding an antigen, involves providing a polypeptide
CC comprising at least one antibody heavy chain fused to at least one
CC antibody light chain, and contacting the polypeptide with a sample having
CC an antigen under conditions such that the polypeptide binds to the
CC antigen; (3) a method (M2), which involves providing a vector comprising
CC a bicistronic expression construct comprising genes encoding an antibody
CC heavy chain gene and an antibody light chain gene, and altering the
CC nucleic acid sequence of a splice acceptor sequence or a splice donor
CC sequence in the antibody light chain gene or the antibody heavy chain
CC gene under conditions such that splicing is prevented at the splice
CC acceptor sequence or donor sequence; (4) a nucleic acid sequence produced
CC by (M2); (5) a vector (III) comprising a modified antibody heavy or light
CC gene, where modification eliminates a splice donor or acceptor sequence
CC in antibody heavy or light chain gene; and (6) a host cell comprising
CC (III). (I) is useful in in vitro binding assays for identifying antigens
CC in a mixture or determining the presence or absence of expression of a
CC particular protein. (I) is also useful as vaccine for treating cancer and
CC infections caused by pathogens e.g. virus or bacteria. The present
CC sequence represents an exemplary antibody fusion protein from the present
CC invention.

XX
CC The present sequence is the protein sequence of hMN-14-0, which is
CC designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC Vkappa without a peptide linker. The use of the zero linker enables the
CC secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC The polypeptide also includes a pelB signal peptide, which precedes the
CC VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC purification. This monospecific triabody is an example of claimed
CC multivalent binding proteins specific for a tumour-associated antigen.
CC The binding proteins are used in the diagnosis and treatment of a tumour,
CC carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC prostate and bladder

CC The present sequence is the protein sequence of hMN-14-1G, which is
CC designed to form an hMN-14 tetrabody. The hMN-14-1G polypeptide comprises
CC the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC Vkappa via a single glycine residues. Use of the 1G linker enables some
CC of the the secreted polypeptide to form a tetrabody with 4 binding sites
CC for CEA. The polypeptide also includes a pelB signal peptide, which
CC precedes the VH moiety to facilitate synthesis of the polypeptide in the
CC periplasmic space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC purification. This monospecific tetrabody is an example of claimed
CC multivalent binding proteins specific for a tumour-associated antigen.
CC The binding proteins are used in the diagnosis and treatment of a tumour,
CC carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT comprises administering, either concurrently or sequentially, Class III
PT anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT therapeutic agent(s).
XX
PS Disclosure; Fig 12A-B; 88pp; English.
XX
CC The invention relates to a method of treating a non-medullary thyroid
CC carcinoma or treating medullary thyroid carcinoma involves administering
CC to a subject, either concurrently or sequentially, a Class III anti-CEA
CC (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC least one therapeutic agent. The antibody or its fragment comprises the
CC complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC ovarian cancer, in a subject. This sequence corresponds to the murine MN-

XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This polypeptide sequence is murine MN-14
CC   antibody light chain variable region protein of the invention.

PS   Example 26; Page 219-220; 229pp; English.
XX
CC   The invention describes a novel antibody which recognizes a tumour
CC   necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) receptor
CC   DR5 (located on chromosome 8p21-22). The antibody has apoptosis-inducing
CC   activity to a cell expressing DR5 in vivo. It is also useful for
CC   preparing a therapeutic for selective apoptosis of abnormal or
CC   dysregulated cells, and for inhibiting cell proliferation in a cell,
CC   preferably a human breast, ovary, colon, haematopoietic, prostate,
CC   lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may
CC   also be administered e.g. paclitaxel, taxol or cycloheximide. The
CC   antibody is used to treat an autoimmune disease, systemic lupus
CC   erythematosus, Hashimoto's disease, rheumatoid arthritis, graft-versus-
CC   host disease, Sjogren's syndrome, Chron's disease, pernicious anaemia,
CC   Addison disease, scleroderma, Goodpasture's syndrome, autoimmune
CC   haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis,
CC   Basedow's disease, insulin-dependent diabetes mellitus, allergy, atopic
CC   disease, arteriosclerosis, myocarditis, cardiomyopathy, glomerular
CC   nephritis, hypoplastic anaemia, rejection after organ transplantation,
CC   and numerous malignancies of lung, prostate, liver, ovary, lymphatic or
CC   breast tissue. Fusions of the TRA-8 light chain variable region with the
CC   human Ig constant region are shown in AAU72815-AAU72819 and AAU72810

PT Inducing apoptosis and inhibiting proliferation of target cells
PT expressing DR5, by contacting the target cell with an antibody that binds
PT TNF-related apoptosis-inducing ligand receptor DR5 and with therapeutic
PT agents.
XX
PS Example 26; SEQ ID NO 76; 274pp; English.
XX
CC The invention relates to a method of selectively inducing apoptosis in
CC and inhibiting (M1) proliferation of target cells expressing DR5,
CC comprising contacting the cell with an antibody that specifically binds
CC tumor necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL)
CC receptor DR5, where the antibody, in its soluble form, has in vivo and in
CC vitro apoptosis-inducing activity in the cell expressing DR5, and
CC contacting the cell with one or more therapeutic agents. M1 is useful for
CC inducing apoptosis in target cell and inhibiting proliferation of target
CC cell expressing DR5, where the target cell is an abnormally proliferating
CC synovial cells (e.g. rheumatoid arthritis synovial cell), activated
CC immune cell (e.g. activated lymphocyte), neutrophil, or virally infected
CC cell. M2 is useful for treating a subject having inflammatory and
CC autoimmune diseases. The inflammatory or autoimmune disease are selected
CC from systemic lupus erythematosus, Hashimoto's disease, rheumatoid
CC arthritis, graft-versus-host disease, Sjogren's syndrome, pernicious
CC anemia, Addison disease, scleroderma, Goodpasture's syndrome, Crohn's
CC disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,
CC multiple sclerosis, Basedow's disease, thrombotic, thrombocytopenia,
CC thrombopenia purpura, insulin dependent diabetes mellitus, allergy,
CC asthma, atopic disease, arteriosclerosis, myocarditis, cardiomyopathy,
CC glomerular nephritis, and hypoplastic anemia. This sequence represents a
CC protein used in the method of the invention.

XX
PT Novel antibody specific for tumor necrosis factor-related apoptosis-
PT inducing ligand, useful for inhibiting cell proliferation in cancer.
XX
PS Claim 30; Page 200; 229pp; English.
XX
CC The invention describes a novel antibody which recognizes a tumour
CC necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL) receptor
CC DR5 (located on chromosome 8p21-22). The antibody has apoptosis-inducing
CC activity to a cell expressing DR5 in vivo. It is also useful for
CC preparing a therapeutic for selective apoptosis of abnormal or
CC dysregulated cells, and for inhibiting cell proliferation in a cell,
CC preferably a human breast, ovary, colon, haematopoietic, prostate,
CC lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may
CC also be administered e.g. paclitaxel, taxol or cycloheximide. The
CC antibody is used to treat an autoimmune disease, systemic lupus
CC erythematosus, Hashimoto's disease, rheumatoid arthritis, graft-versus-
CC host disease, Sjogren's syndrome, Chron's disease, pernicious anaemia,
CC Addison disease, scleroderma, Goodpasture's syndrome, autoimmune
CC haemolytic anaemia, sterility, myasthenia gravis, multiple sclerosis,
CC Basedow's disease, insulin-dependent diabetes mellitus, allergy, atopic
CC disease, arteriosclerosis, myocarditis, cardiomyopathy, glomerular
CC nephritis, hypoplastic anaemia, rejection after organ transplantation,
CC and numerous malignancies of lung, prostate, liver, ovary, lymphatic or
CC breast tissue. Peptides used to design primers for isolating heavy and
CC light chain cDNA of the mouse TRAIL (AAU72801 and AAU72802), TRA-8 are
CC shown in AAU72799 and AAU72800

PT Inducing apoptosis and inhibiting proliferation of target cells
PT expressing DR5, by contacting the target cell with an antibody that binds
PT TNF-related apoptosis-inducing ligand receptor DR5 and with therapeutic
PT agents.
XX
PS Example 16; SEQ ID NO 24; 274pp; English.
XX
CC The invention relates to a method of selectively inducing apoptosis in
CC and inhibiting (M1) proliferation of target cells expressing DR5,
CC comprising contacting the cell with an antibody that specifically binds
CC tumor necrosis factor (TNF)-related apoptosis-inducing ligand (TRAIL)
CC receptor DR5, where the antibody, in its soluble form, has in vivo and in
CC vitro apoptosis-inducing activity in the cell expressing DR5, and
CC contacting the cell with one or more therapeutic agents. M1 is useful for
CC inducing apoptosis in target cell and inhibiting proliferation of target
CC cell expressing DR5, where the target cell is an abnormally proliferating
CC synovial cells (e.g. rheumatoid arthritis synovial cell), activated
CC immune cell (e.g. activated lymphocyte), neutrophil, or virally infected
CC cell. M2 is useful for treating a subject having inflammatory and
CC autoimmune diseases. The inflammatory or autoimmune disease are selected
CC from systemic lupus erythematosus, Hashimoto's disease, rheumatoid
CC arthritis, graft-versus-host disease, Sjogren's syndrome, pernicious
CC anemia, Addison disease, scleroderma, Goodpasture's syndrome, Crohn's
CC disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,
CC multiple sclerosis, Basedow's disease, thrombotic, thrombocytopenia,
CC thrombopenia purpura, insulin dependent diabetes mellitus, allergy,
CC asthma, atopic disease, arteriosclerosis, myocarditis, cardiomyopathy,
CC glomerular nephritis, and hypoplastic anemia. This sequence represents a
CC protein used in the method of the invention.

PT Novel bispecific antibody substituting for function of cofactor that
PT enhances enzyme reaction, and recognizing both enzyme and substrates of
PT enzyme, useful for treating hemophilia A.
XX
PS Disclosure; SEQ ID NO 205; 69pp; Japanese.
XX
CC This invention describes a novel bispecific antibody which can act as a
CC cofactor to enhance an enzyme reaction and can recognize the enzyme and
CC the enzyme substrate. The antibody specifically binds to blood
CC coagulation factor VIII. The invention also describes a composition
CC comprising the antibody and a carrier, a kit useful in preventing and/or
CC treating bleeding associated with a disorder or from a disease caused by
CC bleeding. The composition includes blood coagulation factor VIII. The
CC antibody of the invention can be a blood-coagulation fibrinolysis related
CC factor including blood-coagulation factor VIII, blood coagulation factor
CC X, or blood-coagulation factor IX. The antibody comprises a complementary
CC determining region (CDR) of anti-blood-coagulation factor IX/IXa factor
CC antibody. The novel antibody or composition is useful for preventing
CC and/or treating a disease accompanying bleeding, or the disease resulting
CC from bleeding, where the disease accompanying bleeding or the disease
CC resulting from bleeding develops and/or progresses by an active reduction
CC or deletion of the blood coagulation factor VIII. The disease the
CC develops and/or progresses by an active reduction or deletion of the
CC blood coagulation factor VIII and/or activation blood coagulation factor
CC VIII, is hemophilia A or von Willebrand disease, where the hemophilia is
CC an acquired hemophilia A. This sequence represents a fragment of the
CC antibody described in the method of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX
CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAM family member 7, SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC This sequence represents the light chain variable region of mouse Luc63
CC (MuLuc63 VL).

CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC This sequence represents a CS1 antibody.

XX
CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAM family member 7, SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a FcgammaR receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc63 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc63 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenstrom's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC This sequence represents an anti-CS1 antibody. Note: The present sequence
CC is referred to as SEQ ID No:28 on page 11 but is given as SEQ ID No:29 on
CC page 101 of the specification.

PS Claim 50; Page 73-74; 77pp; English.
XX
CC The invention provides a method of treating or preventing immunoglobulin-
CC mediated reperfusion or ischemic injury in a subject. The method involves
CC administering an inhibitor of an interaction between a pathogenic
CC immunoglobulin, and an ischemic-specific antigen or a component of the
CC complement pathway. The method is useful for treating or preventing
CC immunoglobulin-mediated reperfusion or ischemic injury, in particular,
CC injury that results following a naturally occurring episode, a surgical
CC procedure (e.g. angioplasty, stenting procedure, atherectomy or bypass
CC surgery), or in an injury that occurs in a cardiovascular tissue. The
CC method is also useful for treating or preventing, in a subject, tissue
CC damage following reperfusion caused by a pathogenic immunoglobulin, e.g.

CC pathogenic IgMs. The present sequence represents the light chain variable
CC region of 22A5 IgM, a pathogenic immunoglobulin

CC   -!- MISCELLANEOUS: The mature chain has 12 additional residues at its
CC       amino end, due to a tandem duplication of 36 nucleotides after the
CC       codon for residue 36. Residue 42 corresponds to the N-terminal
CC       residue of typical kappa chains.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New humanised anti-CEA monoclonal antibody - having engrafted murine
PT CDRs, used for diagnosis, imaging and therapy of CEA-producing cancers.
XX
PS Claim 5; Page 38; 62pp; English.
XX
CC New humanised monoclonal antibodies (MAbs) comprising the complementary
CC determining regions (CDRs) of a parental murine class III anti-
CC carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a
CC heterologous antibody which can be derived from any species including
CC human, retain the anti-CEA binding specificity of the parental murine MAb
CC but are less immunogenic in a human subject than the parental MAb. The
CC humanised antibodies can be used in diagnosis, imaging and therapy of CEA
CC -producing cancers and patients receiving the humanised antibodies and
CC conjugates show improved therapeutic results, decreased immune responses
CC and decreased immune-mediated adverse effects compared to the parent
CC antibody. This sequence is a murine derived CDR region which corresponds
CC to CDR 1 in the light chain of the humanised MAb. See AAR97313-97333

PT Detecting infections by acid-resistant microorganisms, particularly for
PT diagnosing Helicobacter pylori, comprises immunochromatographic detection
PT of antigen in feces.
XX
PS Claim 26; Page 26; 90pp; German.
XX
CC This invention describes a novel method for detecting infection by an
CC acid-resistant microorganism (A), in a mammal, using
CC immunochromatography. The method is used to diagnose infection by an acid
CC -resistant microorganism (A), in a mammal, such as Helicobacter,
CC Campylobacter or Mycobacterium, particularly H. pylori (most preferred),
CC H. hepatica, C. jejuni and M. tuberculosis. The method is rapid, simple,
CC inexpensive and non-invasive, and may indicate the stage of infection. A
CC test strip used in the method may include a filter to eliminate particles
CC present in the sample and only a single receptor provides a reasonably
CC secure diagnosis, with specificity and selectivity improved by detecting
CC several epitopes (of catalase) or different antigens (catalase and beta-
CC urease). The method can be automated. This sequence represents a
CC complementarity determining region (CDR) from an antibody raised against
CC the H. pylori catalase or beta-urease antigen which is used to illustrate
CC the method of the invention

PT   Detecting infections by acid-resistant microorganisms, particularly for
PT   diagnosing Helicobacter pylori, comprises an immunoassay on a fecal
PT   sample.
XX
PS   Claim 21; Page 16; 89pp; German.
XX
CC   This invention describes a novel method for detecting, in a mammal,
CC   infection by an acid-resistant microorganism (A) which comprises reacting
CC   a fecal sample with: (i) a receptor (R) such that a complex is formed
CC   with an antigen (Ag) of (A); or (ii) two different R so that a three-part
CC   complex is formed with Ag, and the formation of a complex detected. R are
CC   specific for an Ag which, after passage through the intestines, at least
CC   in some mammals, retains a native (or corresponding) structure against
CC   which the mammal produces antibodies (when immunized or infected with
CC   (A), or its extracts, lysates or derived proteins (or fragments) or
CC   synthetic peptides). The products of the invention have antibacterial
CC   activity. The method is used to diagnose infection by Helicobacter,
CC   Campylobacter or Mycobacterium, particularly H. pylori (most preferred),
CC   H. hepatica, C. jejuni and M. tuberculosis, and also to monitor the
CC   progress of treatment. Receptors, particularly antibodies, directed
CC   against Ag can be used therapeutically for treatment of infections. The
CC   method requires only one R to provide a reasonably secure diagnosis
CC   (although use of two R improves sensitivity), so is relatively
CC   inexpensive and more easily standardized. Also it is direct, non-
CC   invasive, suitable for automation and may indicate the stage of an
CC   infection. This sequence represents a complementarity determining region
CC   (CDR) from an antibody generated against a Helicobacter pylori antigen
CC   (catalase or beta-urease) which is used to illustrate the method of the
CC   invention

PT   Treating non-medullary thyroid carcinoma or medullary thyroid carcinoma
PT   comprises administering, either concurrently or sequentially, Class III
PT   anti-CEA (carcinoembryonic antigen) monoclonal antibody or fragment and
PT   therapeutic agent(s).
XX
PS   Claim 6; SEQ ID NO 20; 88pp; English.
XX
CC   The invention relates to a method of treating a non-medullary thyroid
CC   carcinoma or treating medullary thyroid carcinoma involves administering
CC   to a subject, either concurrently or sequentially, a Class III anti-CEA
CC   (carcinoembryonic antigen) monoclonal antibody or its fragment and at
CC   least one therapeutic agent. The antibody or its fragment comprises the
CC   complementarity-determining regions (CDRs) of a murine MN-14 monoclonal
CC   antibody. (I) is useful for treating medullary thyroid carcinoma or non-
CC   medullary thyroid carcinoma such as pancreatic cancer, breast cancer,
CC   ovarian cancer, in a subject. This sequence corresponds to the CDR1 of
CC   the murine MN-14 antibody light chain variable region and used to
CC   generate the humanised/chimeric antibody of the invention.

PT   Treating non-medullary or medullary thyroid carcinoma, involves
PT   administering to subject, either concurrently or sequentially, anti-
PT   carcinoembryonic antigen antibody or its fragment and therapeutic agent.
XX
PS   Claim 8; Page 76; 122pp; English.
XX
CC   This invention relates to methods for treating cancers that express
CC   carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC   therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC   antibodies that can be used following administration of an agent that
CC   will increase antibody effector functions or following administration of
CC   an amount of interferon effective to upregulate CEA expression in tumour
CC   cells. The present invention describes the anti-CEA antibody as a class
CC   III humanised murine monoclonal antibody that retains specificity for CEA
CC   binding and is preferably an MN-14 antibody or fragment thereof.
CC   Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC   composition useful for the treatment of non-medullary or medullary
CC   thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC   carcinoma, as well as breast or lung cancer. Furthermore, it can
CC   stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC   mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC   cell growth and angiogenesis. This peptide sequence is a CDR region of
CC   the humanised murine MN-14 antibody of the invention.

PT Detecting infections by acid-resistant microorganisms, particularly for
PT diagnosing Helicobacter pylori, comprises an immunoassay on a fecal
PT sample.
XX
PS Claim 27; Fig 4; 89pp; German.
XX
CC This invention describes a novel method for detecting, in a mammal,
CC infection by an acid-resistant microorganism (A) which comprises reacting
CC a fecal sample with: (i) a receptor (R) such that a complex is formed
CC with an antigen (Ag) of (A); or (ii) two different R so that a three-part
CC complex is formed with Ag, and the formation of a complex detected. R are
CC specific for an Ag which, after passage through the intestines, at least
CC in some mammals, retains a native (or corresponding) structure against
CC which the mammal produces antibodies (when immunized or infected with
CC (A), or its extracts, lysates or derived proteins (or fragments) or
CC synthetic peptides). The products of the invention have antibacterial
CC activity. The method is used to diagnose infection by Helicobacter,
CC Campylobacter or Mycobacterium, particularly H. pylori (most preferred),
CC H. hepatica, C. jejuni and M. tuberculosis, and also to monitor the
CC progress of treatment. Receptors, particularly antibodies, directed
CC against Ag can be used therapeutically for treatment of infections. The
CC method requires only one R to provide a reasonably secure diagnosis
CC (although use of two R improves sensitivity), so is relatively
CC inexpensive and more easily standardized. Also it is direct, non-
CC invasive, suitable for automation and may indicate the stage of an
CC infection. This sequence represents a Helicobacter pylori anti-catalase
CC derived antibody HP25/6m/1BM V-region light chain fragment which is
CC described in the method of the invention

CC This invention relates to methods for treating cancers that express
CC carcinoembryonic antigens (CEAs). Specifically, it refers to antibody
CC therapy and in particular anti-carcinoembryonic antigen (anti-CEA)
CC antibodies that can be used following administration of an agent that
CC will increase antibody effector functions or following administration of
CC an amount of interferon effective to upregulate CEA expression in tumour
CC cells. The present invention describes the anti-CEA antibody as a class
CC III humanised murine monoclonal antibody that retains specificity for CEA
CC binding and is preferably an MN-14 antibody or fragment thereof.
CC Accordingly, hMN-14 can be formulated into a cytostatic pharmaceutical
CC composition useful for the treatment of non-medullary or medullary
CC thyroid carcinoma, colorectal cancer, gastric cancer, hepatocellular
CC carcinoma, as well as breast or lung cancer. Furthermore, it can
CC stimulate antibody-dependent cell-mediated cytotoxicity, complement-
CC mediated lysis and apoptosis as well as inhibit cell cycle progression,
CC cell growth and angiogenesis. This polypeptide sequence is murine MN-14
CC antibody light chain variable region protein of the invention.

PT New antibody library comprising cells comprising at least one integrated
PT retroviral vector expressing an antibody light or heavy chain, useful in
PT preparing a composition for diagnosing or treating disorders.
XX
PS Disclosure; Fig 8; 57pp; English.
XX
CC This invention relates to a new antibody library which comprises at least
CC 100 cells, each of which comprises at least one integrated retroviral
CC vector expressing an antibody light or heavy chain. Antibodies are of
CC increasing importance in human therapy, assay procedures and diagnostic
CC methods and a need exists for efficient methods of generating and
CC screening antibody libraries containing large numbers of antibodies. The
CC antibody library of the invention addresses this need, with the
CC additional advantage of strict control over multiplicity of infection
CC (MOI), and is useful in preparing a composition for diagnosing or
CC treating a wide variety of disorders. The present sequence is the amino
CC acid sequence of the MN14LC protein, which was encoded by the Gateway
CC retroviral vectors used in the exemplification of the invention.

PT infectious agents.
XX
PS Example; Fig 2; 68pp; English.
XX
CC The invention relates to a mutant bispecific antibody (mbAb1) comprising
CC at least a human hinge constant region from immunoglobulin G (IgG), two
CC single chain variable fragments (scFvs), and two variable fragments
CC (Fvs), where the constant region contains one or more amino acid
CC mutations in the heavy chain 2 (CH2) domain. The methods and antibody of
CC the invention are used to diagnose or treat an immune dysregulation
CC disease, an autoimmune disease, organ graft rejection, cardiovascular
CC disease, neurological disease (Alzheimer's disease) or graft vs. host
CC disease. The methods are also useful for treating a disease caused by a
CC fungus, virus, parasite, or bacterium. The methods may also be used for
CC intraoperative or endoscopic diagnosis to identify diseased tissue. The
CC autoimmune diseases that may be diagnosed or treated include acute or
CC chronic idiopathic thrombocytopenic purpura, dermatomyositis, Sydenham's
CC chorea, myasthenia gravis, systemic lupus erythematosus, lupus nephritis,

```
CC   rheumatic fever, polyglandular syndromes and diabetes mellitus. The

CC   The present sequence is the protein sequence of hMN-14-0, which is
CC   designed to form an hMN-14 triabody. The hMN-14-0 polypeptide comprises
CC   the C-terminal end of anti-carcinoembryonic antigen (CEA) humanized
CC   monoclonal antibody hMN-14 VH joined to the N-terminal part of hMN-14
CC   Vkappa without a peptide linker. The use of the zero linker enables the
CC   secreted polypeptide to form a triabody, forming 3 binding sites for CEA.
CC   The polypeptide also includes a pelB signal peptide, which precedes the
CC   VH moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. This monospecific triabody is an example of claimed
CC   multivalent binding proteins specific for a tumour-associated antigen.
CC   The binding proteins are used in the diagnosis and treatment of a tumour,
CC   carcinoma, melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma
CC   or myeloma, or a cancer selected from acute lymphoblastic leukaemia,
CC   acute myelogenous leukaemia, biliary, breast, cervical, chronic
CC   lymphocytic leukaemia, chronic myelogenous leukaemia, colorectal,
CC   endometrial, oesophageal, gastric, head and neck, Hodgkin's lymphoma,
CC   lung, medullary thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic,
CC   prostate and bladder

PT   New kit comprising a multivalent, multi-specific binding protein and a
PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Disclosure; Fig 28; 87pp; English.
XX
CC   The present sequence is the protein sequence of a 679 mutant diabody in
CC   which antibody 679 VH has a Gln for Ile amino acid substitution at
CC   position 3 and a Ser for Gln amino acid substitution at position 101.
CC   Murine monoclonal antibody 679 binds with high affinity to molecules
CC   containing the moiety histamine-succinyl-glycyl (HSG). The present
CC   polypeptide comprises: 679 VH(I3Q) linked to 679 Vk via a peptide linker
CC   (enables the secreted polypeptide to dimerise into a diabody, forming 2
CC   sites for HSG); a pelB leader signal peptide (facilitates transport of
CC   the polypeptide into the periplasmic space of Escherichia coli); and 6
CC   His residues (allows purification by IMAC). The 679 diabody was expressed
CC   in E. coli at a level of 10 ug/l of culture, compared with 1 ug/l for the
CC   non-mutant polypeptide. The invention provides a bispecific diabody
CC   comprising an HSG binding site and a carcinoembryonic antigen (CEA)
CC   binding site. The HSG antigen binding site may comprise the VH and Vk
CC   polypeptides of 679 MAb. These diabodies are produced via recombinant DNA
CC   technology and create a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. They pre-target CEA positive tumours
CC   for subsequent specific delivery of therapeutic radioisotopes carried by
CC   HSG-carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC   cardiovascular diseases and inflammatory diseases can be detected or
CC   treated using the methods of the invention

CC   The present sequence is the protein sequence of hMN-14-scFv-L5, which was
CC   designed to form an hMN-14 diabody. The hMN-14-scFv-L5 polypeptide
CC   comprises the C-terminal end of anti-carcinoembryonic antigen (CEA)
CC   humanized monoclonal antibody hMN-14 VH linked to the N-terminal part of
CC   hMN-14 Vkappa by a peptide linker that enables the secreted polypeptide
CC   to dimerize into a diabody, forming 2 binding sites for CEA. The
CC   polypeptide also includes a pelB signal peptide, which precedes the VH
CC   moiety to facilitate synthesis of the polypeptide in the periplasmic
CC   space of Escherichia coli, and a 6xHis C-terminal tag to aid
CC   purification. In the claimed monospecific diabody, each scFv comprises
CC   the present sequence. The diabody is an example of claimed multivalent
CC   binding proteins specific for a tumour-associated antigen. The binding
CC   proteins are used in the diagnosis and treatment of a tumour, carcinoma,
CC   melanoma, sarcoma, neuroblastoma, leukaemia, glioma, lymphoma or myeloma,
CC   or a cancer selected from acute lymphoblastic leukaemia, acute
CC   myelogenous leukaemia, biliary, breast, cervical, chronic lymphocytic
CC   leukaemia, chronic myelogenous leukaemia, colorectal, endometrial,
CC   oesophageal, gastric, head and neck, Hodgkin's lymphoma, lung, medullary
CC   thyroid, non-Hodgkin's lymphoma, ovarian, pancreatic, prostate and
CC   bladder

PT   Novel multivalent, multi-specific binding protein useful for treating
PT   cancer, has first binding site having affinity towards hapten group and
PT   second and third binding sites each having affinity towards target
PT   antigen.
XX
PS   Claim 11; Fig 6; 43pp; English.
XX
CC   The present invention describes a multivalent, multi-specific binding
CC   protein (I) comprising a first binding site having an affinity towards a
CC   hapten group and a second and a third binding sites each having affinity
CC   towards a target antigen, which may be the same or a different target
CC   antigen. (I) has cytostatic, immunosuppressive, antimicrobial, cardiant
CC   and antiinflammatory activities, and can be used in immunotherapy. (I) is
CC   useful for delivering a diagnostic agent, a therapeutic agent, or its
CC   combination to a target, which involves administering (I) to a subject,
CC   waiting for a sufficient amount of time for an amount of the non-binding
CC   protein to clear the subject's blood stream, and administering to the
CC   subject a carrier molecule comprising a diagnostic agent, a therapeutic
CC   agent, or its combination, that binds to a binding site of the binding
CC   protein. (I) is also useful for detecting or treating a human disorder,
CC   preferably cancer, autoimmune diseases, infectious diseases,
CC   cardiovascular diseases and inflammatory diseases. The present sequence
CC   represents a hMN14-scFv-L5 amino acid sequence, which is used in the
CC   exemplification of the present invention

PT   carrier molecule, useful for delivering a diagnostic/therapeutic agent
PT   for treating cancer, and cardiovascular, immune, inflammatory, or
PT   infectious diseases.
XX
PS   Claim 14; Fig 34; 87pp; English.
XX
CC   The present sequence is the protein sequence for polypeptide #1 of novel
CC   bispecific diabody BS2 comprising the VH region of monoclonal antibody
CC   679 and the Vk region of monoclonal antibody hMN14. The 679VH moiety
CC   includes I3Q and C101S mutations, which improve solubility. Mouse
CC   antibody 679 binds with high affinity to molecules containing the moiety
CC   histamine-succinyl-glycyl (HSG). Humanised antibody hMN14 binds
CC   specifically to carcinoembryonic antigen (CEA). The bispecific diabody
CC   can be produced using recombinant DNA methods, e.g. in Escherichia coli
CC   host cells. It provides a novel affinity enhancement system that shows
CC   specific affinity for HSG and CEA. Such bispecific diabodies pre-target
CC   CEA positive tumours for subsequent specific delivery of therapeutic
CC   radioisotopes carried by HSG-carrying peptides. Cancer, autoimmune
CC   diseases, infectious disease, cardiovascular diseases and inflammatory
CC   diseases can be detected or treated using the methods of the invention

PS Claim 14; Fig 32; 87pp; English.
XX
CC The present sequence is the protein sequence for polypeptide #1 of a
CC novel bispecific diabody comprising the VH region of monoclonal antibody
CC 679 and the Vk region of monoclonal antibody hMN14. The 679VH region
CC includes an I3Q mutation which improves solubility. Mouse antibody 679
CC binds with high affinity to molecules containing the moiety histamine-
CC succinyl-glycyl (HSG). Humanised antibody hMN14 binds specifically to
CC carcinoembryonic antigen. The bispecific diabody can be produced using
CC recombinant DNA methods, e.g. in Escherichia coli host cells. It provides
CC a novel affinity enhancement system that shows specific affinity for HSG
CC and CEA. Such bispecific diabodies pre-target CEA positive tumours for
CC subsequent specific delivery of therapeutic radioisotopes carried by HSG-
CC carrying peptides. Cancer, autoimmune diseases, infectious disease,
CC cardiovascular diseases and inflammatory diseases can be detected or
CC treated using the methods of the invention

PS Claim 14; Fig 37; 87pp; English.
XX
CC The present sequence is the protein sequence for polypeptide #1 of novel
CC bispecific diabody BS1.5H comprising the VH region of monoclonal antibody
CC 679 and the Vk region of monoclonal antibody hMN14. The 679VH moiety
CC includes an I3Q mutation, which improves solubility. Mouse antibody 679
CC binds with high affinity to molecules containing the moiety histamine-
CC succinyl-glycyl (HSG). A humanised version of its VH and Vk sequences
CC have been used in BS1.5H. Humanised antibody hMN14 binds specifically to
CC carcinoembryonic antigen (CEA). The bispecific diabody can be produced
CC using recombinant DNA methods, e.g. in Escherichia coli host cells. It
CC provides a novel affinity enhancement system that shows specific affinity
CC for HSG and CEA. Such bispecific diabodies pre-target CEA positive
CC tumours for subsequent specific delivery of therapeutic radioisotopes
CC carried by HSG-carrying peptides. Cancer, autoimmune diseases, infectious
CC disease, cardiovascular diseases and inflammatory diseases can be
CC detected or treated using the methods of the invention
